Integrated Pest Management

Our **PEST PREVENTION** programs reduce the use of pesticides and other harmful chemicals, relying on integrated pest management, food safety, and sanitation principles and procedures to prevent problems before they occur. **Environmental Protection** is the underlying foundation upon which our company is built. Unlike traditional pest control, our pest prevention programs can be performed with **minimal, and often, no pesticide usage at all!**

Knowledge of pest activity is the foundation of pest prevention and control.

Tepeco Consultants Incorporated is leading the way in environmental protection.

PEST MONITORING WITH DIGITAL DATABASE & WEB INTERFACE

We provide our clients with a user-friendly web interface to monitor and analyze all pest activity. Our digital database and web interface:

- Provides quick access to records of pest activity, and pesticide and bait application
- Generates reports and graphs that automatically display trends of all pest monitoring activity.
- Provides client logins and scheduled e-mail reports

- Places records in the digital database with secure web interface to access up to date records.
- Provides significant time savings, accurate and consistent records, “time stamping” of each device, and “wide area” inspections.

CONTINUOUS IMPROVEMENT PROGRAM

Our Pest Prevention Inspections help predict pest patterns and reduce/eliminate the threat. The inspection will identify areas of concern that are conducive to pest harborage before they arise.

Our **Inspection and Sanitation** programs can prepare you for any third-party accreditation audits.

FOOD SAFETY AND SANITATION SERVICES

Our specialized services identify key equipment and develop the frequency of cleaning and preventive maintenance. Appropriate cleaning procedures achieve optimal efficiency with the highest level of confidence in product quality.

PEST CONTROL FUMIGATION & TREATMENTS

Fumigation is sometimes the necessary tool in Integrated Pest Management and eliminating infestations in products, structures and storage container. Tepeco specialists reduce the use of chemical and toxic fumigants where possible and implement environmentally friendly alternatives like **CRYONITE®**.
